

The Next Generation in Aeration Systems

Increases Nutrient Value
of your Slurry ✓

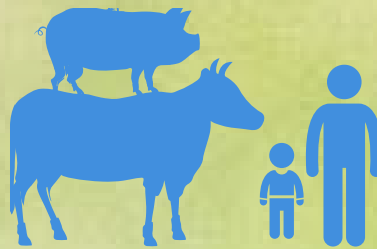

Eliminates the Need
for Agitation ✓

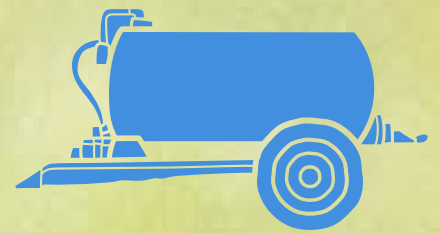

Reduces Ammonia
Emissions by 51% ✓

Reduces Methane
by Over 50% ✓

Safer for Both
Animals & Farmers ✓

Allows Farmers to Optimise
Slurry Use on Farm ✓

Testimonials

"I have two tanks with EASYFIX Slurry Technology & one which doesn't. I've been able to compare the slurries & there is no question that the aerated slurry is way better. I'm saving big money on fertiliser too. The cost of it is going up & regulations are going to prohibit the use of it in the future so you have to get more value from your slurry."

- Paddy Prendergast, Beef Farmer, Kilkenny, Ireland

"The first thing I noticed was just how safe it is. The gases are never allowed build-up in the slurry. You don't have to go into the shed with dangerous gases in there. Probably the main advantage is that there is a considerable saving on fertilizer because we're achieving better use of the nutrients."

- Trevor Crowley, Dairy Farmer, Cork, Ireland

"We established several priorities from the outset.

1. Make the best value of the slurry as a fertilizer
2. Eliminating the need for mixing
3. Being able to empty the tank without taking the animals out of the building.

The EASYFIX Slurry Technology System ticked all these boxes."

- Peter Casey, Beef Farmer, Armagh, Ireland
